Summary

Early-career Software Engineer / Full-Stack Developer with hands-on production experience building web and mobile applications.

Developed and maintained full-stack features for a production Learning Management System with around 400 users at the Faculty of Dentistry, University of Hong Kong, working in a 8-person Agile team alongside professors and project managers using Vue.js, Node.js, PostgreSQL, and REST APIs. Independently designed and built a real-time collaborative application using React Native, Node.js, MongoDB, and Socket.IO.

CUHK Computer Engineering graduate with additional full-stack training through the University of Helsinki's Full Stack Open program.

Education

The Chinese University of Hong Kong (CUHK)

B.ENG. IN COMPUTER ENGINEERING

- Focus on Software engineering and Data Structures and Algorithms
- Final year project: Mobile Game Development with Unity

Skills

Programming	Javascript, Python
Back-end	Node.js, ExpressJS, REST API, Socket.IO
Front-end	Vue.js, React, React Native, HTML5/CSS, Tailwind CSS
Database	PostgreSQL, MongoDB
Tool	Git, Docker, Jest, Bash
Concepts	JWT, Auth, WebSockets, API Design
Languages	English(Proficiency), Cantonese(Native), Mandarin(Proficiency)

Recent Experience

Full stack web app developer

University of Hong Kong

CONTRACTED

Aug. 2025 - Nov. 2025

- Developed, maintained, extended full-stack features for a next generation Learning Management System with RBAC used by around 400 higher-education users at a university-affiliated startup within HKU's Faculty of Dentistry, working in an 8-person Agile team alongside professors and project managers
- Designed and implemented worksheet creation, viewing, and grading workflows using Vue.js, Tailwind CSS, Pinia, and Vue Router, including fill-in-the-blank questions and short-answer tables with image support.
- Developed backend models, controllers, and REST API endpoints using Node.js and PostgreSQL, including PostgreSQL JSONB data structures and integration with existing quiz functionality
- Worked across the development cycle from requirements analysis and technical design to implementation, testing, debugging, documentation, and delivery, collaborating with faculty stakeholders and engineers to clarify requirements and resolve issues

Split: Collaborative Task Management App

Solo Project

MOBILE APPLICATION DEVELOPMENT

Dec. 2024 - Jun. 2025

- Developed a collaborative task management mobile application using React Native, Socket.IO, and Node.js, supporting group-based task creation, assignment, and progress tracking.
- Implemented an authentication system using JWT and bcrypt and built RESTful APIs for user registration, login, and group/task management.
- Designed a responsive UI with React Native, utilizing Flexbox and react-native-responsive-screen for cross-device compatibility, ensuring seamless performance on iOS and Android platforms.
- Integrated Socket.IO for real-time task and group updates, using WebSocket connections to broadcast task creation, updates, and shuffling events to group members.
- Utilized MongoDB with Mongoose for efficient data modeling and management of users, groups, and tasks, ensuring robust data integrity and scalability.
- Managed project versioning with Git, deployed backend on a Node.js server, and conducted rigorous testing to ensure cross-platform reliability and performance.

Micro Video Learning Management System

Solo

FULL STACK DEVELOPMENT

JULY. 2025 - AUG. 2025

- Designed a client-server Micro-Learning Management System supporting Admin, Teacher, and Student workflows, including video sharing, society management, invitations, comments, and access control.
- Designed the system architecture, MongoDB data model, REST API structure, authentication and role-based authorization, and frontend component structure for the application
- Documented the complete development design from requirements analysis and user workflows to data modeling, API design, security considerations, and future scalability improvements.
